## Building Security Management

The PC workstation is a system on a modular basis. Integration of locks and door control systems, video surveillance, access control, escape door control, fire alarm systems, burglar alarm systems, lighting control, air ventilation systems and elevator controls.

Free customizable interface according to your wishes. It is very user friendly and staff efficient. Easy and safe operation.

## Visualization

The user interface is customized according to the specifications. Optionally, the control can be done on graphics (e.g. a floor plan), buttons (keys) and image files.

You can import CAD drawings, existin templates can be used. The operation is easy to use and comfortable through the standard user interface.

## Different representations of a system

Protection against vandalism

Vandal-proof red-green display

### Locks and door controls

A safety management system with which you can monitor and control the entrance and exit doors of buildings on a central computer station and only one space-saving unit.

By integration and centralization the costs of the control and monitoring can be greatly reduced.

Biometrical access control

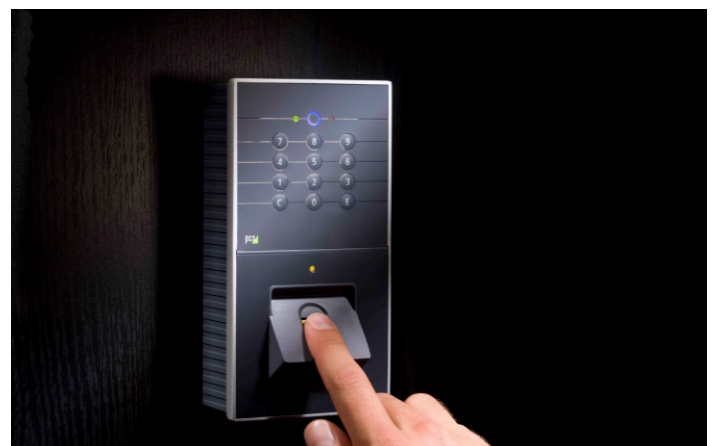

### Access control systems

The security technology provides a comprehensive solution based on the access control compatible with all relevant RFID processes, over mechanical door terminals and interfaces for time management to biometrics for extra security. And because of the approach of physical security and information technology, you may use your identification medium for the access to buildings and to networks and computers.

## Video surveillance

Quickly locate the threat, protects persons and property, detailed recording helps improving the detection rates. A wide range of cameras, components and accessories guarantee the best video solution for your specific needs and your calculated budget. We provide products and solutions offered by leading manufacturers in the fields of video surveillance (CCTV), broadcast and image processing.

## Escape door controls

The safety of people in case of danger and the greatest possible protection of their property values: escape route security systems combine professionally these two claims. Whether it comes to the protection of individual doors or large networked systems with access control - all the requirements are easy and practical to realize. One is common to all systems: an uncompromising safe operation of emergency exit doors.

## Special solutions and developments

One of our specialities and competencies are special solutions or developments according to the wishes of our customers. Here, the needs and opportunities are developed and then implemented together with our customers.

## Mobile outdoor surveillance Nomad

Regardless of cables and external power supply, the mobile unit HS 14 Nomad operates very reliable. Alarms, video live images and camera control are transmitted via GSM or Wi-Fi. Regardless of the weather and visibility conditions a detection is possible. Especially programmable systems also leave single passage ways open. A very sophisticated system allows for virtually no false alarms. A fine detection network provides an accurate target detection of an intruding object. Several mobile units can be connected.
